

FIRST-HAND ACCOUNT

Name: Doris Lilkendey
Age: 46
Position: Head of Project Management in maritime and process simulation

My job: As head of the Project Management department in the maritime and process simulation product area, I am responsible for the contractual implementation of all customer orders in our area. Although the practical execution is carried out by the project managers in my department, I have to intervene constructively if problems or risks are detected. Furthermore, my task is to play a significant role in shaping and influencing both the processes and rules for project execution as well as strategies for the future of our area.

My favorite task: Working with people and finding solutions together.

My career: During my career so far, I have gained comprehensive experience in the areas of sales and project management. To begin with, I became acquainted with various networks and management methods through my employment as a project assistant. This phase transitioned seamlessly into independent operational supervision and execution of simulator projects, both civilian and military. Then I worked as head of sales in the logistics area before I took on my current role.

My qualifications: Graduate engineer

My future: Over the next few years, fulfill my current roles and responsibilities, thus contributing to the success of our maritime and process simulation area. And then see what opportunities come up in our Group.

My tip for starting a career: In a large company you should take the opportunity to make yourself familiar with the tasks and responsibilities of other areas. Always stay true to yourself and bring fresh ideas to the table.
